DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. **Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Araki et al (US 6239402) in view of Soma et al (US 5231690).**

Araki et al disclose an Aluminum Nitride based wafer holder for semiconductor manufacturing device (Fig 8) with a shaft (28) or wafer holder (Fig 9) with a shaft (34) and an electrical circuit formed inside (7 for resistive heating and 9 for plasma) and electrodes for supplying power (12, 13 and 14). The heat capacity of the electrodes could be fairly estimated to be less than 2 J/gK, since compared to the claimed invention the wire (electrodes) number is 3 and length less than 40mm.

This estimation depends upon the typical diameter of power supplying electrodes being 4mm. Typical diameter as taught by Soma et al is 2mm (Col 6 lines 7-10). It may be fairly estimated that even if the diameter is several times that of Soma et al the heat capacity of electrodes will not be more than 5 J/gK.

The heat capacity of the wafer holder however could be fairly estimated to be more than 350 J/gK for wafer holder of Fig 9 and much larger for the wafer holder of Fig 8. Therefore the heat capacity of the electrodes of the disclosed wafer holder would be much less than 10%.
